

Plaza 600

Management Proposal

AGM Real Estate Group · 600 Stewart Street, Seattle

Prepared for Orton Development

Plain-text outline of the digital proposal. Every heading, paragraph and list item in the order it appears on the site. Tables are rendered as bullet lists. Photography and layout are omitted.

01. About AGM

Established in 1998, AGM Real Estate Group has grown into a full-service real estate firm providing institutional-grade management, investment, and development services across the Pacific Northwest.

- Assets Under Management: \$1B (portfolio value)
- Properties Managed: 200+ (across the region)
- Founded: 1998 (Pacific Northwest)
- Service Lines: Asset Management · Property Management · Syndication · Investment · Construction

The Assignment: Plaza 600 · 600 Stewart Street

Plaza 600 is a twenty-story, 217,322-square-foot Class A office tower in Seattle’s Denny Triangle, built in 1969 and repositioned through approximately \$16.8 million of capital investment since 2020. The asset carries a diversified roster of office tenants, ground-floor retail and two levels of subterranean parking, with substantial vacancy to be leased and a building plant of 1969 vintage to be operated. This proposal is scoped to those requirements. AGM will manage the investment in accordance with Ownership’s approved investment strategy and business plan, working closely with Ownership and its designated asset manager to align property operations, leasing support, capital planning and financial performance with the investment objectives established for Plaza 600.

- Rentable Area: 217,322 SF. BOMA · 11,600 SF average floor plate
- Stories: 20 Floors. Class A · side-core · five passenger cabs
- Built / Renovated: 1969 / 2023–26. ~\$16.8M capital since 2020 · \$77/SF
- Use: Office & Retail. Multi-tenant office with plaza-level retail
- Parking: 123 Stalls. Two subterranean levels · 0.6 / 1,000 SF
- Location: Denny Triangle. 100 Walk Score · 100 Transit Score

AGM History: Key Milestones

- 1998: Founded. Established in the Pacific Northwest as a commercial real estate syndication firm
- Expansion: Phillips Real Estate. Acquired Phillips Real Estate, broadening portfolio to multifamily and HOA properties
- Partnership: Lee & Associates. Strategic partnership with Lee & Associates expanded capabilities and national reach
- Expansion: MaKensay Real Estate Services. Acquired MaKensay Real Estate, adding downtown Seattle commercial and historic properties

- Today: Fully Integrated Platform. \$1B AUM, 200+ properties under one roof: management, investment, and construction

Featured Assets Under Management: Diversified Portfolio

Featured assets under management: Bellevue, WA; Fremont, WA; Queen Anne, Seattle WA; Marysville, WA; Juneau, AK.

Regional Footprint: Strong Presence Across Greater Seattle — Managed properties spanning Seattle, Bellevue, Kirkland, Redmond, and the broader Puget Sound, with additional assets in Alaska. Deep local market knowledge supports our ability to anticipate market shifts, protect asset value, and drive consistent performance.

02. Property Management Team

A dedicated management team, led by the Senior Property Manager, supports the property and works together to drive performance and execution.

Property Management Team: Roles & Responsibilities

- Senior Property Manager (primary contact). The primary management contact, responsible for managing property-level execution of the approved investment strategy and day-to-day operations, reporting to Ownership's designated asset manager and coordinating the AGM management team.
- Building Engineers (two, on site). Two full-time building engineers operate and maintain the building's mechanical, electrical, plumbing and fire/life safety systems, carry out the recurring preventive maintenance program, and serve as the on-site lead for building system issues, failures and emergencies. AGM will evaluate the allocation of responsibilities across the engineering team and report recommendations to Ownership and its designated asset manager.
- Tenant Services Coordinator. Tenant work orders, after-hours HVAC requests, access credentials, certificates of insurance, moves, and conference-center scheduling
- Property Operations Associate. Day-to-day coordination and tenant relations
- Financial Analyst. Budget development, forecasting, and ongoing financial performance analysis
- Property Accountant. Property-level accounting, expense recovery reconciliation, and financial reporting
- Project Manager · Construction. Leads capital projects and tenant improvements with a focus on cost control, quality execution, and long-term asset performance
- Vendor & Contract Administrator. Vendor agreements, escalation and renewal calendars, insurance compliance, and competitive rebids

Existing Staffing & Coverage: Plaza 600 is currently supported by two full-time building engineers, a full-time front-of-building security guard and additional third-party vendor services. AGM will initially work within the existing operating structure while evaluating building systems, service requirements, staffing utilization and vendor scopes. Following an appropriate operating assessment, AGM will provide Ownership and its designated asset manager with recommendations regarding engineering, security and third-party service coverage.

03. Investment Strategy

Each engagement begins with a defined investment strategy and clearly articulated performance objectives, which directly drive the operating plan and long-term capital strategy.

- **Investment Strategy Alignment.** AGM will manage the investment in accordance with Ownership's approved investment strategy, return objectives, hold period and risk parameters, translating those objectives into property-level operating, leasing-support, financial and capital initiatives. (Investment Goals; Target Returns; Hold Period; Risk Profile)
- **Proforma & Operating Strategy.** At the direction of Ownership, AGM will prepare and maintain a property-level proforma for Ownership's review and approval. Based upon the approved proforma, AGM will execute the property-level operating strategy and provide budgeting, forecasting, performance measurement and variance analysis aligned with Ownership's investment objectives. (Revenue Projections; Operating Assumptions; Capital Forecast; Return Modeling)
- **Cash Management & Distribution Support.** AGM will manage property-level cash flow and provide cash-flow forecasting, reserve analysis and distribution recommendations consistent with the approved proforma, capital requirements and Ownership's investment objectives. Distribution decisions remain subject to Ownership approval. (Distribution Schedule; Reserve Requirements; Liquidity Management; Cash Flow Forecasting)
- **Operating Budget & Expense Management.** AGM will develop and manage the annual operating budget in alignment with the approved proforma and operating strategy, establishing performance targets and a framework for expense control, forecasting and variance analysis. Material changes outside approved authority will be presented to Ownership and its designated asset manager for review and approval. (Performance Targets; Expense Discipline; Asset Preservation; Forecasting & Variance Analysis)

Strategic Alignment: Investment objectives translated into an integrated property-level strategy encompassing the proforma, cash management, distributions, and operating budget.

Plaza 600 Operating Priorities: Lease-Up Hold

The asset is acquired substantially below stabilized occupancy. Property-level operations will be focused on supporting occupancy recovery, preserving Class A positioning, maintaining expense discipline and supporting building reliability, with expenses, staffing and service levels aligned with current occupancy and the broader investment plan.

- **Operate to a Leasing Standard.** AGM will maintain common areas, amenities, vacant suites and building operations to a consistent standard that supports tours, build-outs and leasing activity throughout the occupancy recovery period, subject to approved budgets, active construction and circumstances outside AGM's reasonable control. (Tour Presentation; Common Area Standards; Amenity Presentation; Vacancy Condition)

- Expense Discipline & Occupancy Alignment. Control operating expenses in line with current occupancy, with vendor scopes and staffing scaled as space is absorbed while maintaining required building and service standards. (Occupancy-Based Budgeting; Vendor Scope Optimization; Staffing Alignment; Variance Reporting)
- Building Reliability & Capital Stewardship. Maintain reliable building operations through disciplined preventive maintenance, condition monitoring, and capital sequencing to reduce operational risk and protect leasing and occupancy objectives. (Preventive Maintenance; Asset Condition; Capital Sequencing; Operational Risk Mitigation)
- In-Place Income Preservation. Protect existing revenue through proactive renewal planning for near-term lease expirations, with service quality and responsiveness positioned as key retention drivers across a diversified tenant base. (Renewal Planning; Lease Expiration Tracking; Tenant Service; Revenue Retention)

Reporting Alignment: Operating performance will be measured against the acquisition pro forma, providing consistent variance reporting against the underwriting assumptions supporting the investment.

04. Building Systems & Engineering

Plaza 600 is served by a central chilled-water plant, district steam heat, a building automation system, five passenger elevators, an addressable fire alarm and emergency power. AGM manages these as a single documented program with one equipment record and one maintenance schedule, operated by the on-site engineering team.

Plaza 600 is served by a central chilled-water plant, district steam heat, a building automation system, five passenger elevators, an addressable fire alarm and emergency power. AGM will manage building systems through an integrated building engineering and maintenance program designed to support documentation, preventive maintenance, and compliance oversight.

- Systems Managed: 12 (major building systems)
- Preventive Maintenance: 64 (recurring scheduled tasks)
- Vertical Transportation: 5 (passenger cabs · plus floor-20 lift)
- Coverage: 24/7 (on-call engineering response)

Systems Under Management: Plant & Life Safety Inventory

Mechanical & Environmental (4 systems)

- Heating. Configuration at Plaza 600: District steam loop feeding perimeter zones through induction boxes with local zone control. Scope of Maintenance: Steam trap and strainer service, valve packing, freeze protection, single-source utility oversight.
- Cooling. Configuration at Plaza 600: Water-cooled chillers in the mechanical penthouse with paired cooling towers. Scope of Maintenance: Seasonal start-up and shutdown, water treatment, tube punching and eddy-current testing on cycle, refrigerant compliance.
- Air Distribution. Configuration at Plaza 600: Variable air volume duct network with individual zone controls; supply and return fans in both machine rooms. Scope of Maintenance: Quarterly and annual fan maintenance, belt and bearing service, damper cleaning, filter program.
- Building Automation. Configuration at Plaza 600: Automation system upgraded in 2025, controlling scheduling, zone setpoints and after-hours conditioning. Scope of Maintenance: Schedule and setpoint management, alarm response, trend review, monthly after-hours HVAC billing run.

Life Safety & Power (3 systems)

- Fire & Life Safety. Configuration at Plaza 600: Addressable panel with emergency communications; wet standpipe and electric fire pump installed 2023; garage sprinkler coverage. Scope of Maintenance: Monthly, quarterly and annual device testing; extinguisher and smoke-head confidence tests; damper testing; shaft pressurization.

- Emergency Power. Configuration at Plaza 600: Emergency generator serving building safety and support systems. Scope of Maintenance: Monthly load test, annual confidence test, fuel management, transfer switch verification.
- Vertical Transportation. Configuration at Plaza 600: Five passenger cabs, interiors refinished in 2023, plus a floor-20 accessibility lift installed in 2024. Scope of Maintenance: Contract oversight, state operating permits, annual inspection, monthly recall and quarterly telephone testing, entrapment response.

Fabric, Access & Site (5 systems)

- Plumbing. Configuration at Plaza 600: Mixed PVC, steel, copper and cast-iron distribution; sub-basement sump pumps. Scope of Maintenance: Sump pump testing, backflow preventer certification, leak and water-intrusion response.
- Electrical. Configuration at Plaza 600: Three-phase 277/480-volt service, 6,000-amp capacity. Scope of Maintenance: Panel and switchgear inspection, capacity confirmation against planned tenant loads, emergency lighting.
- Envelope & Roof. Configuration at Plaza 600: Precast column covers with bronze anodized curtain wall; single-ply PVC membrane roof. Scope of Maintenance: Roof and parapet inspection, sealant and glazing condition tracking, warranty administration.
- Security & Access. Configuration at Plaza 600: Card-key access control; camera server infrastructure upgraded 2020. Scope of Maintenance: Credential administration, recording verification, patrol contract oversight.
- Parking & Garage. Configuration at Plaza 600: Two subterranean levels with exhaust fans and revenue control equipment. Scope of Maintenance: Exhaust fan service, life-safety ventilation verification, stall and license administration.

Building systems, equipment configurations and recurring maintenance information presented in this section are based upon the Plaza 600 Offering Memorandum, maintenance schedules and other building information provided to AGM during due diligence. Systems under management and the associated scope of work are based on information available to AGM at the time of this proposal and remain subject to field review and verification during onboarding and ongoing operations.

Preventive Maintenance Program: Recurring · Scheduled · Documented

The building currently operates under an established recurring engineering task list. During onboarding, AGM will review the existing program, confirm applicable maintenance requirements based on available records and field observations, incorporate verified tasks and next-due dates into the management program, and identify gaps, overdue items or recommended adjustments for review with Ownership and its designated asset manager.

- Inventory: Equipment Record. Review available equipment records and building system information, with updates made as appropriate to support ongoing maintenance planning and asset oversight. (Asset Tagging; Useful Life)

- **Schedule: Task & Frequency Load.** Daily through multi-year maintenance tasks documented by frequency and next-due date. (Next-Due Continuity; Vendor Scope Mapping)
- **Implement: Maintenance Execution.** Routine maintenance activities coordinated through on-site engineering and qualified third-party vendors, consistent with established maintenance requirements and applicable service scopes. (Engineering Rounds; Coverage Plan)
- **Document: Documentation.** Maintenance activities, findings, and deferred items documented as appropriate to support ongoing asset oversight and reporting. (Deferred Item Tracking; Maintenance Records; Certificates on File)

Engineering Operations: Staffing, Response & Revenue

- **On-Site Engineering & Coverage.** Plaza 600 is currently supported by two full-time building engineers. AGM will manage the existing engineering team and evaluate the allocation of responsibilities, preventive maintenance requirements, operating schedules and third-party technical services. Following an initial operating assessment, AGM will provide Ownership and its designated asset manager with recommendations regarding the appropriate ongoing engineering structure and coverage.
- **24/7 System Event Response.** After-hours system events, including alarms, elevator entrapments, water intrusion, HVAC issues and power disruptions, will be routed through established on-call protocols for assessment, vendor coordination and escalation to the appropriate AGM and Ownership contacts as circumstances warrant.
- **After-Hours HVAC.** After-hours HVAC requests are administered through the building automation system and billed in accordance with applicable lease terms, with activity reconciled through property accounting. (BAS Run Reports; Ledger Reconciliation)
- **Energy & Utility Management.** Utility consumption, rates, and operating trends are monitored against budget, with schedule and setpoint management used to support operating efficiency and variance reporting to Ownership. (Consumption Tracking; Invoice Audit; Benchmarking)
- **Service Contract Oversight.** Maintenance responsibilities are allocated between on-site engineering and qualified third-party service providers based on system requirements and technical expertise, with vendor scopes competitively procured and managed as appropriate. (Coverage Gaps; Competitive Rebid)
- **Warranties & Permits.** Available warranties, operating permits, and inspection records are maintained and monitored as appropriate to support regulatory compliance and asset protection. (Warranty Register; Permit Currency)

Operating Objective: Building systems are managed through a structured engineering program focused on preventive maintenance, documentation, compliance oversight, and system reliability in support of ongoing building operations and leasing activity.

05. Construction, Facilities & Capital Projects

AGM's Construction & Facilities team supports asset performance through proactive maintenance, vendor oversight, and capital planning, preserving property condition, limiting deferred maintenance exposure, and aligning capital decisions with Ownership's investment strategy.

- **Repairs & Maintenance.** Coordinate routine maintenance and repairs within approved budgets, with preventive planning used to support asset condition, operating continuity, and cost control. (Maintenance Coordination; Service Request; Preventative Planning; Maintenance Records)
- **Inspections & Documentation.** Conduct periodic property inspections and systems reviews to identify maintenance needs, document conditions, and inform preventive maintenance and capital planning. (Monthly Inspections; Photographic Records; Systems Verification; Work Order Recommendations)
- **24/7 Facilities Response.** After-hours property incidents requiring facilities support are routed through established on-call protocols for assessment, vendor coordination, and appropriate escalation. (On-Call Facilities Representative; Incident Assessment; Vendor Dispatch; Authorization Protocols; Owner Call Tree)
- **Capital Planning & Project Oversight.** AGM will develop multi-year capital forecasts aligned with Ownership's investment strategy, with projects prioritized based on asset condition, risk, operational impact and investment objectives. Following familiarity with building systems and operating history, AGM will develop recommendations regarding capital priorities, timing, budgets and recommended reserve requirements for review with Ownership and its designated asset manager. Approved projects will be supported by competitive procurement and project oversight through completion, subject to Ownership approval and the authority established under the Property Management Agreement. (Multi-Year Forecasting; Useful Life Analysis; Capital Expense Prioritization; Bid Package Preparation)

Asset Protection: Proactive maintenance and disciplined capital planning aligned with Ownership's investment strategy to preserve asset condition, manage operational risk, and support long-term value.

Capital Program in Context: Completed & Outstanding

Approximately \$16.8 million, or about \$77 per square foot, has been invested in the asset since 2020, across the lobby reposition, a chiller replacement, standpipe installation, building automation controls, corridor and restroom upgrades, an accessibility lift, a cooling tower rebuild, parking and security equipment, and tenant improvement capital. That program materially reduces near-term base building requirements without eliminating them. AGM's first capital deliverable is to separate completed work from work outstanding.

- **Completed Capital Verification:** Each project line is reconciled against invoices, permits, closeout documents and warranties, so that Ownership holds evidence of the work delivered and of what remains under warranty.
- **Remaining Base Building Scope:** Chilled-water plant remaining life, elevator modernization horizon, curtain wall and sealant condition, roof membrane remaining life, riser and standpipe completion, and electrical capacity for planned tenant loads. Each item is scoped, priced and sequenced.

- **Tenant Improvement Delivery:** With substantial vacancy to absorb, tenant improvement and spec suite delivery is expected to be a significant capital activity during the hold period. Following required approvals, AGM will coordinate approved tenant improvement projects against established budgets, project schedules and applicable lease requirements, and will report material budget, schedule or delivery risks to Ownership and its designated asset manager.
- **Five-Year Capital Plan:** A single forward plan stating annual cost, priority and recommended reserve requirements, reviewed with Ownership at budget and updated as condition assessments and system performance data accumulate.
- **Reserve Adequacy:** The capital reserve is tested against the plan so that the schedule is funded on the timeline it assumes.

Deliverable: A deferred maintenance and capital schedule priced and sequenced by year, built from the equipment record, the recurring task list, and any third-party condition assessment obtained at acquisition

06. Compliance, Life Safety & Risk

A building of this vintage carries compliance obligations that a newer asset does not. AGM maintains these as a dated calendar recording the test or filing that satisfies each requirement, the date it falls due and the certificate that evidences completion.

A building of this vintage carries compliance obligations that a newer asset does not. AGM maintains these as a dated calendar in which each requirement is paired with the test or filing that satisfies it, the date it falls due and the certificate that evidences completion.

Compliance Calendar: Requirement, Frequency & Evidence

Fire & Life Safety (5 requirements)

- Fire Alarm. Requirement: Addressable panel certification, device testing and smoke detector maintenance. Cadence: Monthly. Evidence on File: Test report & panel certification.
- Fire Alarm. Requirement: Smoke-head confidence testing. Cadence: Quarterly. Evidence on File: Confidence test record.
- Suppression. Requirement: Standpipe, fire pump and sprinkler air compressor service; dry trip testing on cycle. Cadence: Annual +. Evidence on File: Service & trip test records.
- Extinguishers. Requirement: Confidence check and annual certification. Cadence: Monthly. Evidence on File: Tag & certification record.
- Life Safety. Requirement: Fire and smoke damper testing, elevator shaft pressurization, exit sign inspection. Cadence: Annual. Evidence on File: Vendor test reports.

Mechanical & Equipment (4 requirements)

- Elevators. Requirement: State operating permits, annual inspection, recall and telephone testing. Cadence: Monthly. Evidence on File: Permits & inspection certificates.
- Pressure Vessels. Requirement: Pressure vessel and refrigeration inspection. Cadence: Annual. Evidence on File: State inspection certificates.
- Emergency Power. Requirement: Generator load test and annual confidence test. Cadence: Monthly. Evidence on File: Run logs & confidence test.
- Plumbing. Requirement: Backflow preventer testing and certification. Cadence: Annual. Evidence on File: Certified tester report.

Building & Regulatory (4 requirements)

- Energy. Requirement: Washington Clean Buildings Performance Standard: benchmarking, energy management plan and performance compliance. Cadence: Per statute. Evidence on File: Filings & benchmarking reports.

- Accessibility. Requirement: Path of travel, entries, restrooms and elevator accessibility. Cadence: Ongoing. Evidence on File: Review & barrier-removal list.
- Hazardous Materials. Requirement: Asbestos-containing material register and O&M plan; PCB ballast survey. Cadence: Ongoing. Evidence on File: Register & O&M plan.
- Permits & Citations. Requirement: Open citation, violation and permit register against city and state records. Cadence: Ongoing. Evidence on File: Agency search results.

Cadence reflects the recurring program identified from building records and applicable regulatory requirements. During onboarding, AGM will review available certifications and compliance records against identified requirements and report material gaps, expired documentation or items requiring further review to Ownership and its designated asset manager, together with recommended next steps.

Risk Management: Regulatory, Physical & Operational

- Clean Buildings Performance Standard. Washington's Clean Buildings Performance Standard applies to covered commercial buildings of this size. AGM establishes which requirements and deadlines apply, benchmarks current performance and prices the path to compliance, so that the obligation is identified and budgeted in advance (Applicability Review; Energy Benchmarking; Energy Management Plan; Compliance Cost & Deadline)
- Hazardous Material Management. A building of this vintage requires a documented position on asbestos-containing materials before any disturbance. AGM maintains the register and the operations and maintenance plan, and applies it to tenant improvement, repair and vendor scopes (ACM Register; O&M Plan; Contractor Protocols; Disturbance Review)
- Vendor Compliance & Insurance. Vendors are required to hold current insurance, licensing and an executed agreement on file before performing work. Certificates are tracked to expiration and coverage is verified against the scope performed. (Certificate Tracking; License Verification; Additional Insured; Scope-Appropriate Limits)
- Tenant Insurance & Lease Compliance. Certificates are collected, verified against lease requirements and tracked to renewal, alongside enforcement of use, alteration and building rule provisions. (COI Collection; Lease Requirement Match; Renewal Tracking; Rules Enforcement)
- Emergency Preparedness. A current emergency response plan covering evacuation and shelter procedures, floor warden structure, tenant contact tree and coordinated drills, maintained and distributed to the tenant roster (Response Plan; Floor Wardens; Tenant Drills; Contact Tree; First Responder Coordination)
- Seismic, Envelope & Water Intrusion. Condition is monitored across structure, curtain wall, sealant and roof. Water-intrusion events are investigated to source and documented, with findings carried into the capital plan. (Condition Monitoring; Envelope Tracking; Intrusion Investigation; Capital Plan Feed)

Compliance Posture: Identified regulatory and compliance obligations will be maintained within a compliance calendar with applicable due dates, responsible parties, available supporting documentation and current status

reported to Ownership. AGM will coordinate with qualified third-party professionals where appropriate for technical, legal or regulatory determinations.

07. Tenant Experience & Building Operations

Tenant retention on a roster of smaller tenants depends substantially on service quality. AGM administers tenant-facing operations as a defined service program with stated response standards and monthly reporting against them.

Tenant retention on a roster of smaller tenants depends substantially on service quality. The repositioned lobby, conference center, bike room and shower facilities require staffing, scheduling and maintenance to deliver that result. AGM administers tenant-facing operations as a defined service program with stated response standards and monthly reporting against them.

Tenant Service Program: Daily Operations

- **Work Orders & Service Requests.** Requests are submitted through the tenant portal, acknowledged and triaged against a defined standard, assigned to engineering or a vendor, and closed with the tenant notified. Full request history is retained against the suite.
- **Tenant Relations & Retention.** AGM maintains regular contact with each tenant independent of any service issue, tracks expansion and contraction intentions ahead of expiration, and reports tenant satisfaction as an indicator of renewal probability.
- **Access Control & Security.** The building currently maintains a full-time front-of-building security guard together with its access-control and camera systems. AGM will administer the existing security program, including credential administration, after-hours access and visitor procedures, and, after becoming familiar with building operations, tenant activity and security requirements, provide Ownership and its designated asset manager with recommendations regarding appropriate ongoing security coverage and vendor scope. (Credential Administration; Audit Trail; Patrol Coordination)
- **Conference Center & Amenities.** The conference center, bike room and shower facilities are scheduled, cleaned, stocked and maintained, and are available for demonstration to prospective tenants. (Conference Scheduling; Amenity Standard; Tour Readiness)
- **HVAC Comfort & After-Hours.** Zone comfort complaints are investigated at the system level. After-hours requests are processed through the automation system and billed against lease terms. (Zone Diagnosis; Billing Accuracy)
- **Moves & Build-Out Support.** Freight scheduling, contractor access, building protection and insurance verification are coordinated so that occupancy events do not disrupt building operations. (Freight Scheduling; Contractor Access)
- **Janitorial & Common Areas.** Janitorial scope, day porter coverage, window washing and waste removal are managed to a written standard and inspected, with scope scaled as the building absorbs vacancy. (Written Scope; Inspection Program; Occupancy Scaling)
- **Tenant Communication.** Scheduled notices are issued for maintenance, testing and construction activity, with a single point of contact maintained for the roster. (Advance Notices; Single Point of Contact)

Retention Logic: Service responsiveness is an important component of tenant satisfaction and retention. AGM will maintain defined service standards, track tenant interactions and renewal considerations, and report material tenant-service and retention matters to Ownership and its designated asset manager.

Plaza-Level Retail Operations: Mixed-Use Coordination

Ground-floor retail operates on different hours, service requirements and lease economics than the office floors above it. AGM administers the operational interface between the two uses.

- Operating Interface: Hours of operation, plaza and lobby access, routing deliveries, waste and grease handling, and venting or exhaust obligations administered against the retail lease and building rules.
- Shared Systems: Responsibility is allocated for shared mechanical, plumbing, electrical and life-safety systems serving both retail and office use, so that repair responsibility is established in advance of any event.
- Lease Economics: Triple-net retail administration alongside full-service office leases, with separate recovery mechanics, separate reconciliation, and sales reporting and percentage rent collection where the lease provides for it.
- Tenant Mix: Retail positioned as an amenity to the office roster and to plaza traffic, with vacant retail merchandised toward uses that serve the building's daytime population.
- Presentation: Storefront, signage and plaza condition are maintained to the standard of the repositioned lobby. The plaza level is the point of arrival for prospective office tenants.

08. Office & Retail Leasing Support

Leasing will be executed by the third-party leasing agent appointed by Ownership. AGM supports that effort by maintaining the building in showing condition, supplying current property-level information, and coordinating approved build-outs against applicable lease requirements and project schedules.

Leasing will be executed by the third-party leasing agent appointed by Ownership. AGM will work closely with Ownership, its designated asset manager and the leasing agent to align property operations, building presentation, tenant intelligence, operating expense information, lease economics and approved tenant improvements with the leasing strategy. AGM's role is to support the leasing effort through property-level information, responsive operating support, tenant retention initiatives and coordination of approved build-outs against applicable lease requirements and project schedules. With substantial vacancy to absorb, this coordination will be a primary management focus.

Leasing Support Cycle: Prospect to Rent Commencement

- **Present: Tour-Ready Building & Space.** Vacant suites cleaned, lit, conditioned, and maintained in tour condition; common areas and amenities presented to a Class A standard for tours (Vacant Suite Standard; Amenity Presentation; Broker Access)
- **Transact: Deal Support & Documentation.** Current stacking plans, availability and operating expense information are supplied to the brokerage team, with prospect diligence questions answered from the operating record (Stacking Plan Currency; Operating Expense & Base Year Data; Prospect Diligence)
- **Deliver: Build-Out & Occupancy.** Tenant improvements bid, contracted, and managed to the delivery date the lease commits to, with allowance draws documented and rent commencement confirmed (TI Bid & Award; Allowance Draws; Rent Commencement)

Positioning the Vacancy: Office & Retail

- **Small-Tenant Office Demand.** The Seattle CBD leasing market is dominated by requirements under 10,000 square feet, and the building's floor plate and existing roster are matched to that segment. AGM supports a leasing strategy directed at that demand (Sub-10,000 SF Requirements; Divisible Floor Plates)
- **Spec Suite Program.** Pre-built suites in the sizes the market is transacting, reducing the build-out interval that directs smaller tenants toward move-in-ready alternatives. (Pre-Built Inventory; Time to Occupancy)
- **Plaza-Level Retail Merchandising.** Vacant retail is positioned by analyzing which uses are underserved in the surrounding blocks and among the building's daytime population, and by developing a target operator profile from space specifications, foot traffic and Ownership objectives (Neighborhood Gap Analysis; Operator Profile)
- **Renewal & Rollover Management.** A rollover calendar is maintained tenant by tenant, with renewal outreach beginning ahead of expiration and prioritized by the tenants rolling soonest. Retention of in-place income carries materially lower cost than replacement (Rollover Calendar; Early Outreach)

- Property Website & Online Presence. A branded property website carrying availability, floor plans, amenities and building information, serving as the central destination for brokerage traffic and the access point for the tenant and owner portals (Branded Website; Availability & Floor Plans; Google Business Profile)
- Leasing Activity Reporting. Tours, proposals, absorption against plan and leasing cost per square foot, reported monthly alongside the financial package. (Absorption vs. Plan; Leasing Cost per SF)

Forward Lease Structure: Based upon AGM's review of the existing lease economics and operating expense structure, the current base-year recovery model does not adequately keep pace with increases in property operating expenses. AGM will therefore work with Ownership, its designated asset manager, legal counsel and the third-party leasing agent to structure new leases and renewals toward triple-net or other enhanced expense-recovery structures designed to provide more complete recovery of applicable operating expenses, while coordinating final lease economics with the approved leasing strategy and market conditions.

Management Contribution: Showing condition, accurate information and on-schedule build-out delivery are the three management inputs that affect the interval between tour and rent commencement

09. Financial Management & Reporting

AGM's platform is designed to provide transparent property-level financial and operating reporting, with the monthly financial package targeted for delivery by the 15th of each month, subject to timely receipt of required banking, vendor, tenant and third-party information. Reporting may be customized to align with Ownership and asset-manager requirements, with portal access to available property information.

- **Monthly Reports.** Comprehensive monthly financial package providing full visibility into property performance, cash position, and operating results (Balance Sheet; Income Statement; Rent Roll & Lease Expirations; A/R & A/P; Budget vs. Actual; Bank Reconciliation; Paid Invoices)
- **Annual Budget & Tenant Charges.** Annual operating budget development paired with disciplined administration of tenant-side charges, reconciliations, and lease compliance across a mixed full-service and triple-net roster (Operating Budget; Scheduled Expenditures; Base Year Stops; NNN Allocation; Annual CAM Reconciliation; Credits & Charges)
- **Investment Performance.** Active monitoring of property performance against the proforma, with forward-looking projections and variance analysis to keep results on plan (Proforma Generation; Performance vs. Projections; Return Tracking; Forecasting; Variance Analysis)
- **Banking & Financial Controls.** Financial control procedures designed to protect Ownership funds and promote transparency through segregated accounts, internal controls, and secure systems (Segregated Bank Accounts; Separation of Duties; Owner Approval Protocols; Monthly Reconciliations)

Investment Reporting: Comprehensive monthly reporting on investment performance, financial position, and operating activity, delivered to Ownership via Owner Portal by the 15th of each month

Expense Recovery Administration: Where the Reporting Complexity Sits

Plaza 600 does not operate under a single recovery structure. Office tenants are predominantly full-service gross, reimbursing their pro-rata share of expense increases over individually negotiated base years, while retail operates on triple-net or modified structures. AGM's review indicates that the existing base-year lease structure does not adequately keep pace with increases in property operating expenses, creating increasing exposure to unrecovered expenses as the building's cost structure grows. AGM will continue to administer existing leases in accordance with their terms while working with Ownership, its designated asset manager and the third-party leasing agent to transition new leases and renewals toward triple-net or other enhanced expense-recovery structures.

- **Full-Service Gross.** Structure at Plaza 600: Tenant reimburses pro-rata share of operating expense increases above a negotiated base year. AGM Administration: Base year abstracted per lease, expense pool defined, annual reconciliation prepared and issued with supporting detail.
- **Triple Net & Modified.** Structure at Plaza 600: Retail tenancy reimbursing operating expenses, or taxes and insurance only, with a defined commencement month. AGM Administration: Separate expense pool and reconciliation cycle, commencement date calendared, monthly estimates set and reconciled annually.

- Amortized Capital. Structure at Plaza 600: Capital expenditures recovered from tenants on the established methodology where leases permit. AGM Administration: Eligible capital identified, amortization schedule built, recovery billed and disclosed in the reconciliation.
- Percentage Rent. Structure at Plaza 600: Retail lease provisions requiring sales reporting above a breakpoint. AGM Administration: Sales reports collected on schedule, breakpoint calculated, percentage rent billed and audited against reported sales.
- Assessment Recovery. Structure at Plaza 600: Prepaid local improvement district assessments recovered from tenants over the assessment period. AGM Administration: Recovery schedule maintained separately from the operating expense pool to prevent both lapse and duplicate recovery.
- Tenant Services. Structure at Plaza 600: After-hours HVAC, submetered or separately metered utilities, storage, and parking. AGM Administration: Usage captured at source, billed monthly at lease rates, and reconciled to the general ledger.
- Parking & Telecom. Structure at Plaza 600: Monthly parking licenses across owned and licensed stalls, plus telecom and riser agreements. AGM Administration: Stall roster and rate schedule maintained, third-party license obligations tracked, revenue reconciled monthly.

Recovery Strategy & Accuracy: On a building of this size and lease mix, both the structure of future lease recoveries and accurate administration of existing lease provisions materially affect net operating income. AGM will abstract and administer existing recovery provisions, track the financial impact of unrecovered operating expenses, reconcile recoveries in accordance with applicable lease terms, and support the transition toward improved recovery structures as leases roll.

Reporting Package: Monthly, Fixed Calendar

- Financial Statements: Balance sheet, income statement, general ledger, bank reconciliation, and paid invoice detail at the line level the operating budget is built on.
- Budget to Actual: Variances explained in writing, with year-end reforecast where the variance is structural.
- Rent Roll & Expirations: Current rent roll, occupancy, and a forward lease expiration schedule with renewal status against each tenant.
- Accounts Receivable: Aged receivables reported against a stated collection threshold, with the action taken on each delinquency.
- Operations Summary: Work order volume and closure, preventive maintenance completion, compliance status, capital progress, and any open building system finding.
- Leasing Activity: Tours, proposals, executed leases, absorption against plan, and leasing cost per square foot.
- KPI Summary: A defined set of operating and financial indicators reported on the same cadence as the financial package.

Customization: AGM's platform supports customization of financial reporting to align with Ownership preferences

10. AGM Master Insurance Program

AGM will review Plaza 600's existing insurance program in conjunction with the building's operating history, systems, risk profile and applicable lender requirements.

AGM will review Plaza 600's existing insurance program in conjunction with the building's operating history, systems, risk profile and applicable lender requirements. Once AGM has sufficient familiarity with the asset, AGM will work with Ownership, its designated asset manager, insurance broker and other appropriate professionals to make recommendations regarding appropriate property-level coverage, including potential participation in AGM's Master Insurance Program where eligible. Availability, pricing, coverage terms and any potential cost efficiencies remain subject to underwriting, property eligibility and carrier approval.

- **Insurance Solutions Evaluation.** AGM assists Ownership in evaluating property insurance solutions, including participation in AGM's Master Insurance Program (Coverage Review; Risk Profile Assessment; Program Alternatives)
- **Grouped Placement.** The program enables eligible assets within the AGM-managed portfolio to be considered for placement within a grouped insurance structure, rather than being separately marketed on a standalone basis (Portfolio-Level Placement; Eligible Asset Review; Carrier Coordination)
- **Coverage & Cost Efficiency.** AGM's Master Insurance Program can support more efficient coverage placement and, in many cases, economies of scale relative to individually placed policies, which may result in cost efficiencies for the investment (Economies of Scale; Efficient Placement; Cost Savings)
- **Program Conditions.** Availability, pricing, and coverage terms are subject to underwriting review, property eligibility, and carrier approval (Underwriting Review; Property Eligibility; Carrier Approval)

Key Benefit: Shared master insurance policy for eligible properties may provide access to broader coverage capacity and competitive premiums through portfolio scale

Placement Considerations for High-Rise Office: Plaza 600

A twenty-story tower of this vintage places differently than the balance of a portfolio. Earthquake limits and deductibles, the schedule of values, boiler and machinery coverage for a central plant, and business interruption assumptions on a partially leased building each require a defined position before binding. AGM reviews these with Ownership and the broker in advance of each renewal.

- **Schedule of Values:** Insured square footage and total insured value are reconciled against rentable area and the replacement cost basis, so that the schedule matches the asset and the premium is calculated on accurate figures.
- **Earthquake:** Limits and deductibles are set against lender requirements and Ownership's risk tolerance. This is a material line item for a Seattle high-rise, with significant variance between the available options.
- **Equipment Breakdown:** Boiler and machinery coverage is confirmed against the central chilled-water plant, district steam interface, elevators and emergency generator.

- Business Interruption: Rental value and business interruption assumptions are based on in-place income and the lease-up plan rather than stabilized projections.
- Tenant and Vendor Coverage: Tenant and vendor certificates are verified against lease and contract requirements, with the landlord named as required and limits appropriate to the work performed.
- Claims Administration: Incidents are documented from the operating record, claims are filed and tracked to resolution, and loss history is maintained to support future placement.

Program Conditions: Availability, pricing, and coverage terms remain subject to underwriting review, property eligibility, and carrier approval

11. Tools & Technology

The AGM platform provides Ownership and tenants with secure, 24/7 access to property information, real-time financial reporting, payment history, work order submission, and integrated communication tools. AGM also develops purpose-built platforms for a specific assignment.

The AGM platform provides Ownership and tenants with secure, 24/7 access to property information, real-time financial reporting, payment history, work order submission, and integrated communication tools.

- **Owner Portal.** Real-time property dashboard with live financial and operational reporting, secure banking for distributions and contributions, and investment-level performance metrics (Real-Time Dashboard; Live Financial & Ops Reports; Financial Reports & Documents; Secure Banking Information; Investment Performance Metrics; Multi-Property View)
- **Tenant Portal.** Self-service tenant platform supporting online payments, account visibility, document access, and work order tracking through a single secure interface (Online Rent Payment; Account Balance & Charges; Tenant Documents & Leases; Email & Text Correspondence; Work Order Tracking; Tenant Insurance Submission)
- **Property Website.** Public-facing website that supports leasing efforts, showcases the building and its amenities, and serves as the central access point for the tenant and owner portals (Professional Online Presence; Amenities & Availability; Contact Information; Public-Facing Showcase; Portal Access Point)

Platform Access: Secure, 24/7 access to property information, real-time reporting, and integrated communication tools

Asset Management Reporting: Overview

AGM's reporting platform will provide Ownership and its designated asset manager with access to available property-level financial, operating, leasing, capital and compliance information necessary to monitor execution against the approved investment strategy and proforma. Reporting tools and dashboards will be configured to support the agreed reporting requirements for Plaza 600.

- **Consolidated Dashboard.** A single view of all investments, including current performance metrics, capital contributions, distributions, and overall portfolio value.
- **Loan & Capital Structure Visibility.** Access to key loan terms, maturity dates, debt balances, and capital stack summaries across each asset.
- **Document & Reporting Access.** On-demand access to financial statements, K-1s, operating reports, tax documents, and investment updates.

Owner Portal: Overview

The AppFolio Owner Portal provides secure, real-time visibility into property performance and financial reporting. Designed for transparency and operational clarity, the platform centralizes key property-level data in one accessible dashboard.

- **Consolidated Property Dashboard.** A single view of portfolio performance, including rent collections, income and expenses, net operating income, and occupancy metrics.
- **Financial Reporting & Statements.** On-demand access to monthly owner statements, balance sheets, income statements, general ledgers, and year-end tax documentation.
- **Operational Transparency.** Real-time updates on leasing activity, maintenance requests, vendor invoices, and work order status, supporting visibility into day-to-day operations.

Purpose-Built Platforms: Built for This Engagement

AGM develops purpose-built platforms where a standard portal does not meet the requirements of an assignment. The Plaza 600 due diligence platform delivered to Ownership carries every verification item with a workstream, a status, an owner and the document that closes it. The offering memorandum, rent roll, lease register, vendor register and recurring engineering program are loaded and searchable in a single location. It was delivered within the feasibility window.

- **Plaza 600 Due Diligence Platform.** An access-controlled platform organizing the acquisition: five diligence workstreams with a status and an owner recorded against every item, the lease and contract registers, the recurring engineering task and equipment register, a document request tracker and a digital file room. Findings are recorded separately from assumptions, and outstanding information is identified as outstanding (Diligence Register; Lease & Contract Registers; Engineering Task Register; Document Request Tracker; Digital File Room; Access Controlled)
- **Operating Continuity of the Same Platform.** The registers assembled during diligence become the operating registers. The equipment record, preventive maintenance schedule, vendor and contract calendar and lease abstracts carry directly into operations and are not rebuilt after closing (No Rebuild at Closing; Continuous Equipment Record; Contract Calendar; Lease Abstracts)
- **In-House Development.** AGM builds and maintains these platforms internally. Development is scoped to a specific assignment and delivered on short timelines. The same capability supports the property website, the reporting dashboards and the consolidated portfolio view (Built In-House; Short Delivery Timelines; Assignment-Specific; Maintained by AGM)

Why It Matters: Information handling determines the outcome of management transitions and diligence periods. AGM builds the platform an assignment requires and operates from it, as already demonstrated on this asset

12. Management Transition

Management transitions carry recurring points of failure. AGM administers transition as a scheduled program with named deliverables at fixed intervals. On this asset, a substantial portion of the underlying work is already complete.

Management Transitions carry recurring failure points: a lapsed maintenance interval, an unfavorable automatic renewal, an expired certificate, an unreconciled receivable. AGM administers transition as a scheduled program with named deliverables at fixed intervals. On this asset, a substantial portion of the underlying work is already complete.

Transition Schedule: From Closing Forward

- **Before Closing: Preparation Against the Diligence Record.** Lease abstracts, vendor register, equipment record, and recurring engineering program are already assembled. Banking, accounting setup, insurance placement, tenant notice packages and the emergency response plan are prepared in advance of the closing date.
- **Day 1: Operational Takeover.** Vendor introductions, tenant notices issued with the new points of contact, utility and access control transfers, banking and accounts receivable operational, and 24/7 emergency response in place at closing.
- **First 30 Days: Contracts, Leases & Receivables.** AGM will review available service agreements against the vendor register and calendar identified renewal, termination and notice dates, with recommendations regarding continuation, rebid, modification or termination presented to Ownership and its designated asset manager as appropriate. Lease files will be abstracted with recovery terms captured, and opening receivable balances will be reviewed and reconciled based on available records.
- **First 60 Days: Systems, Compliance, Maintenance & Coverage Assessment.** AGM will review the preventive maintenance schedule and available equipment records, carry forward verified next-due dates, review major building systems to the extent reasonably practicable, and assess available compliance documentation. Based on the initial operating period, AGM will also present recommendations regarding the existing two-engineer staffing structure, front-of-building security coverage, third-party vendor services and other property-level staffing or service requirements. Clean Buildings and other material compliance matters will be coordinated with appropriate professionals and presented with recommended next steps, estimated costs and applicable deadlines as information becomes available.
- **First 90 Days: Leasing and Capital in Motion.** The brokerage team is supported with current availability and operating expense data, vacant suites are brought to tour standard, renewal outreach is initiated, and the first five-year capital plan and reserve recommendation are delivered.
- **Monthly: Owner Reporting on a Fixed Calendar.** Financial package, operations summary, compliance status, capital progress and leasing activity are delivered on a fixed monthly calendar, with variances explained.

What Reduces the Risk Here: Position at Closing

- **Diligence Already Performed.** AGM has already performed diligence on this asset. The offering memorandum, rent roll, lease register, vendor register and recurring engineering program are loaded and reconciled, and transition proceeds from that record (Registers Built; Findings Logged; Documents Filed; Reconciled Record)
- **Service Agreements Mapped Before Closing.** Active vendor agreements identified during diligence are mapped to the recurring task program they support, with renewal and notice dates calendared so that service continuity and contract review are managed through changeover (Contract Register; Notice Windows; Service Continuity; Rebid Candidates)
- **Maintenance Program Carried Forward.** The incumbent task program is carried forward with frequencies and next-due dates retained, so that maintenance intervals and compliance testing continue on their established schedule through changeover. (Task-for-Task Migration; Next-Due Continuity; Gap Extension; Interval Continuity)
- **Local Team and Vendor Market.** Puget Sound property and asset management headquartered in Bellevue, with current knowledge of downtown vendor pricing, fit-out cost and leasing conditions. Principals are available on site. (Bellevue Headquarters; Local Vendor Market; On-Site Principals; Current Cost Data)

Transition Objective: Establish operational continuity; identify inherited maintenance, compliance, contract, accounting and staffing matters; evaluate the existing engineering, security and vendor structure; and provide Ownership and its designated asset manager with a prioritized operating plan and recommendations aligned with the approved investment strategy.

13. Management Fees

AGM offers two service options to fit different ownership needs — Full Management and Accounting Only. Both include a one-time onboarding fee and ongoing monthly fees.

AGM offers two service options to fit different ownership needs. Both include a one-time onboarding fee and ongoing monthly fees. The schedule below is structured for a multi-tenant office tower of this size, identifying on-site engineering, capital and tenant improvement coordination and expense recovery administration as distinct scopes.

- **Service Option · Full Management: Full-Service Management.** Day-to-day operations, including accounting, financial management, building systems and preventive maintenance oversight, vendor and contract administration, tenant relations, expense recovery reconciliation, compliance calendar management and ongoing reporting.
 - Fee: 3%*, of gross revenues, Minimum \$12,500 / month
 - Onboarding · One-Time: \$12,500, Transition, setup & website
- **Add-On · Either Service: Capital Project & Tenant Improvement Coordination.** Capital projects, tenant improvements, renovation, or other work beyond routine repair and maintenance — including bid preparation, contractor selection, and course-of-performance oversight. On an asset in lease-up, tenant improvement delivery is the dominant capital activity.
 - Fee: Hourly Rate /% of Project Cost, Fee approved prior to project commencement

Property-Level Staffing & Operating Costs: Charged as Property Operating Expense

A 217,322-square-foot tower with a central plant requires dedicated on-site personnel. These positions and costs are carried as property operating expenses rather than as management fees, consistent with the building's existing operating budget and with standard practice for commercial office assets.

- **On-Site · Operating Expense: Building Engineers.** At Cost. The building is currently staffed with two full-time building engineers. Salary, benefits, uniforms, tools and other approved employment costs will be carried as property operating expenses consistent with the approved operating budget. AGM will evaluate the existing engineering structure during the initial operating period and make recommendations to Ownership and its designated asset manager regarding appropriate ongoing staffing and coverage.
- **Security · Operating Expense: Front-of-Building Security.** At Cost. The building currently maintains a full-time front-of-building security guard. Security staffing and related contracted services will be carried as property operating expenses pursuant to the approved operating budget. AGM will evaluate the existing security program and make recommendations regarding appropriate ongoing coverage following its initial operating assessment.
- **Vendors · Operating Expense: Third-Party Vendor Services.** At Cost. Existing janitorial, elevator, mechanical, fire/life-safety, waste, parking, security and other contracted building services will be reviewed for scope,

performance, cost and alignment with the operating strategy, with recommendations for continuation, modification or competitive rebid presented to Ownership and its designated asset manager as appropriate.

- Monthly: Technology Fee. \$X/ month. Website hosting, software licensing, platform maintenance and the purpose-built registers, charged as a property operating expense
- Per Engagement: Specialized Role Fees. Tailored per scope. Tenant services coordinator, project manager and marketing associate, priced to the building's requirements and scope and determined during the proposal process
- Annual: Expense Recovery Reconciliation. Included. Base year, triple-net, amortized capital, percentage rent and assessment recovery reconciliation prepared annually and issued to tenants with supporting detail
- As Incurred: Third-Party Reports & Compliance Filings. At Cost. Condition assessments, energy benchmarking and Clean Buildings filings, hazardous-material surveys and required agency filings, approved in advance

* Percentage applied to gross revenues. The capital and tenant improvement coordination rate and the monthly technology fee are shown as placeholders and remain to be finalized. Property-level staffing and third-party costs shown "at cost" are property operating expenses, not management fees, and are budgeted and approved with the annual operating budget.
